

TERT × BRAF × RAS 8-cell re-validation, TCGA-THCA n=504

Resolution of the 'TERT-only triple-neg-ish is worst' paradox raised by Prof. Yu (2026-04-29 AM)

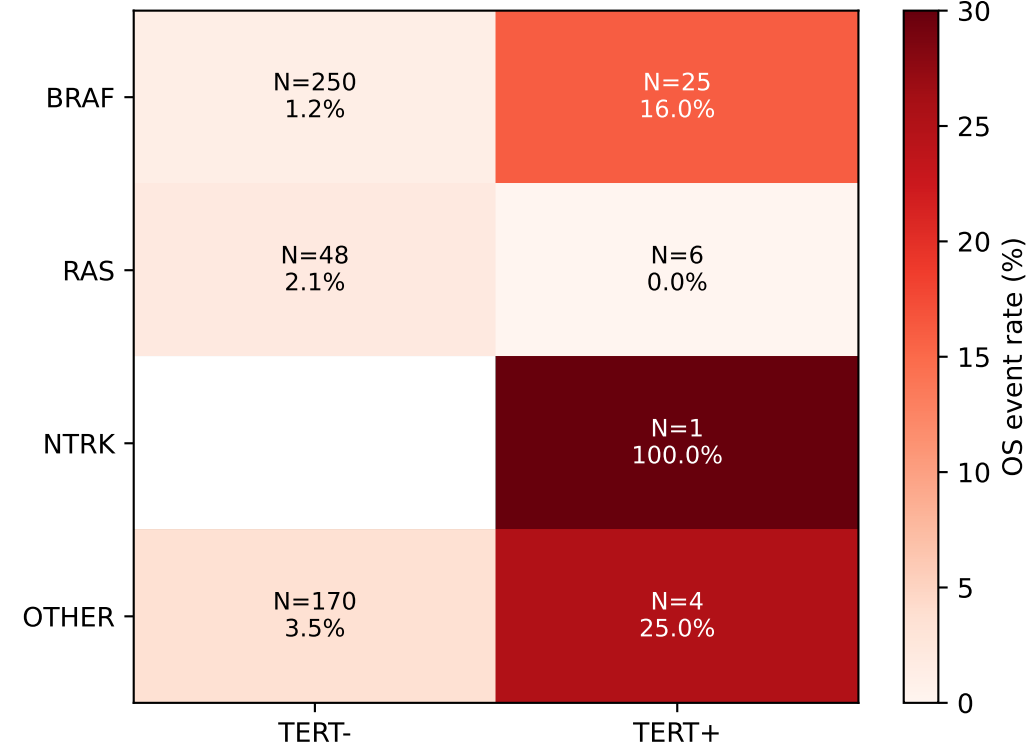

A. Overall survival, 4 collapsed groups (TCGA-THCA)

B. Bootstrap HR (1000×), 8-cell vs Triple_neg (OTHER_TERT-)

C. 8-cell N and event rate (driver × TERT)

D. TERT+ population is dominated by BRAF+ (69% are BRAF+, not 'triple-neg')
