

TCGA-THCA: methylation x DM1 x HLA-G (8-gene mean methylation as global hypomethylation proxy)
HLA gene-expression module - not allele genotype. Cancer-cohort allele genotyping is out of scope per separation rules.

DM1 vs 8-gene mean methylation
 $\rho=0.491$ $p=5.09e-33$ $n=523$

mean_8g_beta vs HLA-G
 $\rho=0.562$ $p=7.32e-45$ $n=523$

DM1 vs HLA-G
 $\rho=0.431$ $p=5.12e-25$ $n=523$
