

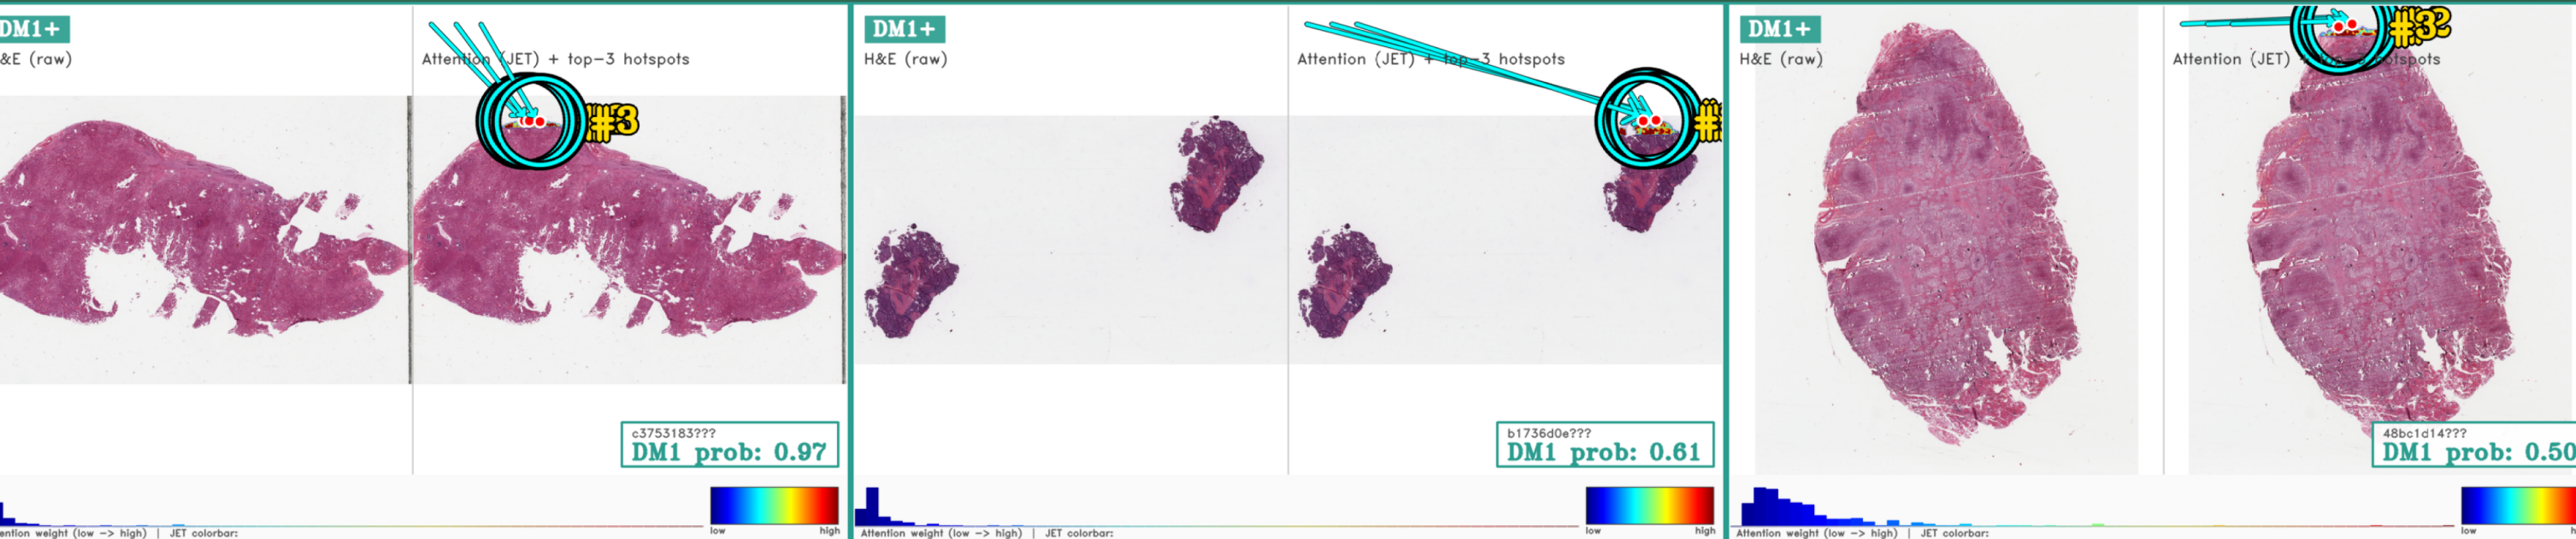

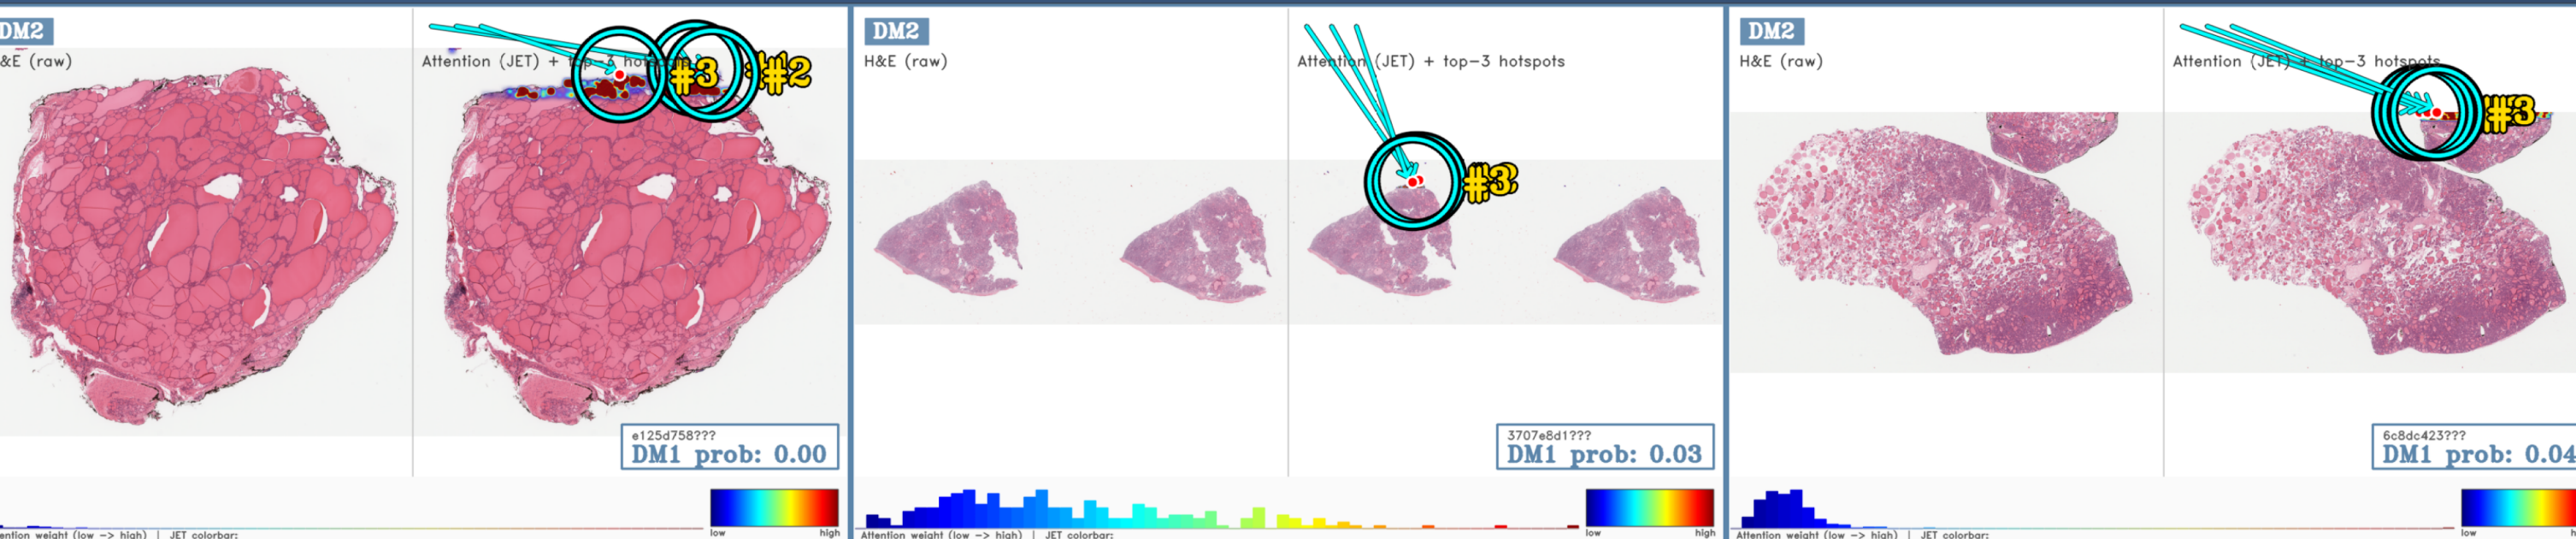

Fig 5 v3 – CLAM gated-attention heatmaps (top-3 DM1+ / top-3 DM2)

JET colormap | per-pixel alpha | 95th-pct norm | top-3 hotspots ringed

DM1+ HIGH CONFIDENCE (predicted DM1, label = DM1) -- attention concentrates on dedifferentiated zones

DM2 LOW CONFIDENCE (predicted DM2, label = DM2) -- attention diffuse / on well-differentiated follicular regions

Heatmap = JET (low blue -> high red), per-pixel alpha so high-attention regions are vivid. Numbered rings = top-3 attention hotspots per slide. Histogram = per-tile attention distribution; right-side mini colorbar.
