

Supp Fig SX (v12) — DM1 sub-A/B convergent two-axis model: MAPK + HT both reach 8-gene silencing

HT/B-cell signature z (HLA-II/CD79/AICDA/CXCL13)

A. Two convergent axes to 8-gene silencing
sub-A = MAPK-axis · sub-B = HT-axis

B. Panel suppressed regardless of MAPK
(both sub-A high-MAPK and sub-B low-MAPK)

C. Panel suppressed regardless of HT axis too
→ panel = downstream sink of two upstream paths
