

Supplementary Fig. S1

Supplementary Fig. S1 Enrichment of CD36⁺ pro-inflammatory macrophage in cancer correlates with poor outcome of patients with PTC. **A**, Violin plots displaying tumor marker genes expression in peritumor and tumor cells. **B**, Gene expression patterns projected onto UMAP plots of *CD68*, *CD8A*, *CD4*, *FOXP3*, *KLRB1*, *CD19*, *TNFRSF17*, *MKI67*, *ULEC4C*, *TG*, *VWF* and *COL1A2*. **C**, Bar chart illustrating the percentage ratio of eleven cell types in tumor and peritumor tissues. **D**, Gene Set Enrichment Analysis (GSEA) of tumor cells in high and low myeloid cell infiltration groups using scRNA-seq data. ES, enrichment score; NES, normalized enrichment score. **E**, Dot plot displaying the expression of selected genes related to the PI3K-AKT signaling pathway.
