

Report of Human Cell Line Authentication

Report of Human Cell Line Authentication

Delivery Date: Nov 18, 2022

Analysis Date: Nov 23, 2022

I . Sample

Sample type: cell, labeled as IHH4, was received on Nov 18, 2022.

II . Method and Procedure

1. DNA was extracted by chelex 100 reagent.
2. DNA is amplified with STR Multi-amplification Kit (Goldeneye™20A ID System);
3. PCR products are assayed with ABI 3730xl DNA Analyzer (Applied Biosystems®).
4. Data were analyzed using GeneMapper3.2 software and then compared with the ATCC and DSMZ databases for reference matching.

III. Results

1. The STR profiles of the negative and positive control match expectations.
2. The STR profiles of the cell line are in the attached tables and figure.
3. The results analysis:
 - 1) No cross-contamination of other human cell lines is found.
 - 2) The submitted profile has an 100%% match with the following DSMZ human cell line(s) in the DSMZ STR database (8 loci plus Amelogenin): IHH4.

Notes:

1. Based on the ANSI Standard, cell lines with $\geq 80\%$ match are considered to be related; i.e. derived from a common ancestry. Cell lines with between a 55% to 80% match require further profiling for authentication of relatedness.
2. This data and analysis are for research use only.

Table 1: STR profiles of the cell line

Cell line IHH4 (Fig. IHH4)		
Marker	Allele 1	Allele 2
D19S433	13	14
D5S818	9	13
D21S11	30	31
D18S51	13	15
D6S1043	14	15
D3S1358	16	16
D13S317	10	13
D7S820	9	10
D16S539	9	11
CSF1PO	12	12
Penta D	9	9
AMEL	X	Y
vWA	16	18
D8S1179	11	15
TPOX	11	11
Penta E	10	12
TH01	9	9
D12S391	17	18
D2S1338	18	18
FGA	23	24
