

Supplementary Fig. S3

Supplementary Fig. S3 $CD36^+$ macrophages selectively interact with active metabolic $ZCCHC12^+$ tumor cells in PTC. **A**, Violin plots displaying marker genes expression in epithelial cell subtypes. **B**, Heatmap displaying the inferred CNV profiles of single cells (y axis). **C**, Violin plots illustrating $ZCCHC12$ expression in tumor cells from patients of European and East Asian ancestries. **D**, Boxplots displaying $ZCCHC12$ expression in adenocarcinoma. **E**, Violin plots showing metabolism-related gene expression in epithelial cell subtypes. **F**, Gene Set Enrichment Analysis (GSEA) of $ZCCHC12^+$ tumor cells from scRNA-seq dataset. ES, enrichment score; NES, normalized enrichment score.
