

Current visual verdict

GADGVGKSAL/HLA-C*08:02 has completed 10 ns explicit-solvent MD with low final peptide RMSD and persistent anchor/TCR contacts.

HMTEVVRHC/HLA-A*02:01 is still partial at latest local sync; status trace is stable but trajectory QC awaits completion/sync.

Boundary: MD is structural plausibility and wetlab prioritization evidence, not immunogenicity proof.
