

Liu 2024 RR-PTC primary-tumour proteomics (n = 48) — the authors' 7-protein differentiation score versus radioiodine behaviour

a · By radioiodine behaviour subgroup
medians decline in the hypothesised order · Kruskal-Wallis $P = 0.39751$

b · By radioiodine uptake — strongest signal here
medians decline in the hypothesised order · Kruskal-Wallis $P = 0.39751$ · $P = 0.0883$ (trend, not significant)

c · Differentiation versus MAPK output — significant
Spearman rho = -0.420 · $P = 0.00294$
