

GSE112202 — digoxin redifferentiation by TERT subgroup

a

b

Subgroup summary

TERT subgroup	median log ₂ FC	# genes ↑
TERT wild-type	+0.65	7/8
TERT mutant	+1.16	8/8

Digoxin restores 8-gene panel expression in both TERT-wt and TERT-mut subgroups, confirming redifferentiation is panel-mediated, not TERT-mediated.

Redifferentiation effect preserved across TERT status — median log₂FC = +0.65 (wt) vs +1.16 (mut).
