

GSE151179 — 8-gene differentiation panel vs RAI uptake at the metastatic site (lesion-level RAI effect label)

a • Patient-level, tumour specimens
d = +0.37 [-0.34, +0.98] • P = 0.534

ADJUSTED for purity + driver
(β , panel-z units)

NEGATIVE CONTROL
non-neoplastic thyroid

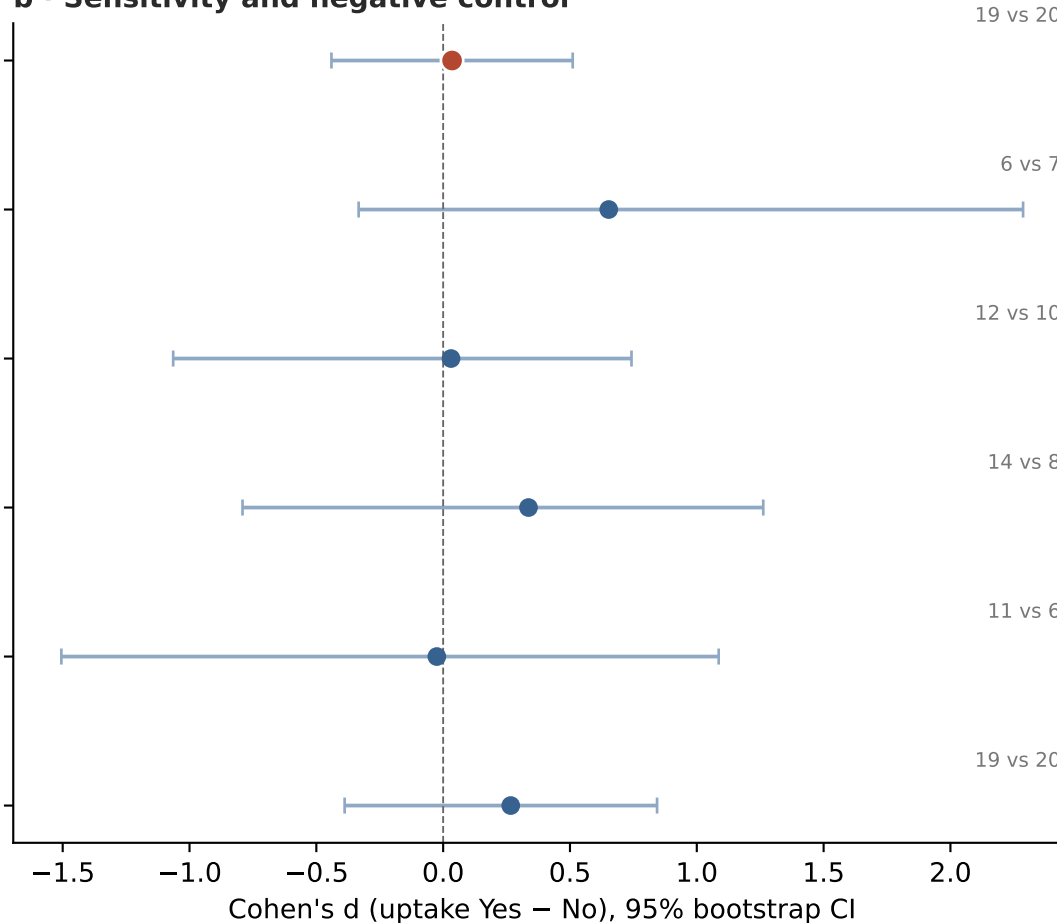

High-purity tumours only

Pre-RAI specimens only

Primary tumours only

All tumours (sample-level)

b • Sensitivity and negative control

c • Per-gene effect, uptake Yes vs No
