

Claim boundary

TCR-aware evidence is useful, but incomplete paired TCR coverage limits the main claim.

- + Optional TCR expert for TCR-available rows
- + Diagnostic explanation of selected false positives
- + Wetlab proof of TCR evidence
- + Missing paired TCR data is a benchmark limitation

Allowed claims

- Universal TCR-aware neoantigen prediction
- Clinical utility
- Structural predictions are always correct
- TCR recognition from peptide-HLA alone

Not allowed yet

Decision: diagnostic / wetlab tool now; main-method claim only after strict external paired-TCR benchmarks.
