

Figure 6 ★ · A clinical reflex pathway and projected translational impact of DM1 status

DM1 상태에 기반한 임상 reflex 경로와 예상 임상 영향.

a

Reflex algorithm flowchart

RNA → DM1 → fusion test → selpercatinib (48/1000 PTC)

b

DM1 over-represents the ATA intermediate tier — current RAI uncertainty zone
DM1 은 ATA 중간 위험군 (RAI 결정 불확실 구간) 에 과대표현

c

HMA + RAI re-induction rationale

Decitabine 으로 promoter 탈메틸화 → RAI 흡수 재개 근거

d

GSE151179 post-RAI dediff

Pre vs post-RAI Cohen's d = -1.01 · MW p = 1 × 10⁻⁴

e

Decision-curve analysis

DM1-stratified strategy 가 treat-all/none 을 net-benefit dominate

f

Prospective DM1-stratified trial schema (illustrative)

schematic only — not a pre-registered protocol

DM1 환자 200 명/arm 으로 24 개월 구조 재발 30 % 감소 검출

g

Selpercatinib waterfall (TCGA)

TCGA tumor DM1 score top 에 RET-positive 농축
